DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Species I (claims 12-14) in the reply filed on 04/23/2007 is acknowledged. The traversal is on the ground(s) that the restriction requirement is not proper. According to the applicant's, the basis for the examiner's restriction requirement is not correct.

The examiner has found the species as indicated in the restriction requirement are deemed to lack unity of invention for the reasons below:

Although the reference DE 196 54 769 A does not render obvious of claim 12, the reference to Hedstrom (US 5003483), which cited in the IDS dated on 05/17/2007, does it because it describes that the vehicle brake is activated only when a specified setpoint speed (target value) has been exceeded by an actual speed of the vehicle by more than a specified speed difference greater than zero (see abstract and column 4, lines 3-17, if the actual vehicle's speed exceeds a target speed, braking system is actuated; if actual vehicle's speed is less than the target speed, the brake application is adjusted downward). For that reasons, there is no special technical feature when considered as a whole defines a contribution over the prior art of record. Therefore, the species listed in the restriction requirement do not relate to a single general inventive concept under PCT Rule 13.1.

The requirement is still deemed proper and is therefore made FINAL.

An action on claims 12-14 follows:

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 12-14 are rejected under 35 U.S.C. 102 (b) as being anticipated by Hedstrom (US 5003483).

Regarding claim 12, Hedstrom teaches A method for controlling a speed of a vehicle, comprising: when an actual speed of the vehicle exceeds a predefined setpoint speed (abstract) by more than a first predefined speed difference, activating a service brake of the vehicle, wherein the first predefined speed difference has a value greater than zero.

As to claims 13, and 14, Hedstrom further teaches that if actual vehicle's speed is less than the target speed, the brake application is adjusted downward (column 4, lines 3-17). In addition, when the braking system is activated, the torque requested inherently reduced.

Response to Arguments

Applicant's arguments with respect to claims 12-14 have been considered but are moot in view of the new ground(s) of rejection.
